

CHRISTOPHER MEYER

Computer Science Student — Software Engineering, Backend Systems, and Full-Stack Development

 christophermeyer.dev  cameyer06@gmail.com  [cameyer06](https://www.linkedin.com/in/cameyer06)  [cameyer260](https://github.com/cameyer260)  618-772-4471

Education

Southern Illinois University Edwardsville

Aug 2024 – Fall 2027

Bachelor of Science in Computer Science, Minor in Mathematics

Edwardsville, Illinois

- Cougar Pride Scholarship, Johnetta Haley Scholarship
- GPA: 3.57/4

Relevant Coursework

- Algorithms and Data Structures
- Operating Systems
- Database and Web System Development
- Programming Languages
- Intro to Computer Organization and Architecture
- Linear Algebra

Technical Skills

Languages: TypeScript, Python, Java, C++, Rust, PHP, SQL, HTML/CSS

Technologies/Frameworks: React/Next.js, Node, Express, NestJS, Supabase, Stripe, MongoDB

Developer Tools: Claude Code, Neovim, Git, GitHub, Docker, Cloudflare, AWS, SSH, Unix

Experience

Zipper

Mar 2026 – Aug 2026

Software Engineer Intern

Remote

- Shipped 50+ features and bug fixes across a studio management platform for boutique fitness studios, spanning a full-stack TypeScript codebase covering CRM, Stripe payments, scheduling, and staff management.
- Extended an autonomous, agentic AI pipeline that drafts end-to-end code changes, advancing draft tickets to a runnable state and verifying them against live dev servers and the running web app.
- Owned delivery of agent-assisted changes from incomplete tickets to production: investigated the application and codebase, designed implementation approaches, directed and iterated on fixes for security, architecture, functionality, code quality, and UI/UX, and validated releases through CI/CD.

Freelance Software Developer

2025 – Present

Self-Employed

Remote

- Designed, built, and deployed custom websites for local business owners end-to-end, earning 5-star client reviews.
- Sourced and onboarded clients directly, delivering tailored full-stack sites; expanding the practice toward custom software systems that integrate or replace fragmented business tools and extend marketing automation.

Projects

Site Builder (Autonomous Agent CLI) | *TypeScript, Bun, Claude, Astro, Cloudflare Pages, Playwright*

Jun 2026

- Built a CLI tool that takes a prospective client's URL, documents, or notes and returns a working, deployed prototype website in under 20 minutes, serving as a personal freelance outreach engine.
- Orchestrated a six-stage autonomous agent pipeline (init → ingest → synthesize → generate → audit → deploy), pairing deterministic code with headless Claude for the AI-heavy stages.
- Gated quality with axe-core accessibility and Lighthouse audits, then deployed generated Astro sites to Cloudflare Pages and returned a shareable link.
- Used the tool to automate outreach prototypes for 20+ prospective clients.
- Code: github.com/cameyer260/site-builder

StafferAI (Multi-Tenant AI Knowledge Platform) | *Next.js, OpenAI, Supabase, pgvector, Stripe*

Mar 2026

- Engineered a production, multi-tenant RAG platform enabling teams to query internal documents with source-grounded AI responses and citations.
- Built organization-scoped semantic retrieval with pgvector and OpenAI embeddings, enforcing strict tenant isolation via Supabase Auth, Postgres RLS, and role-based access control.
- Implemented a document ingestion and scalable indexing pipeline, plus Stripe subscriptions enforcing usage guardrails and per-tenant rate limiting.
- Live Site: stafferai.app | Code: github.com/cameyer260/stafferai-public
